

Ontime System's Manual

Minimum software and hardware requirements- This is a very light application that does not take a lot of power to use.

Operating System:

- Windows 7, Windows 8, or Windows 10
- Mac OSX, 10.8, 10.9, 10.10, or 10.11
- Android 5 Lollipop, 6 Marshmallow, 7 Nougat, 8 Oreo, 9 Pie

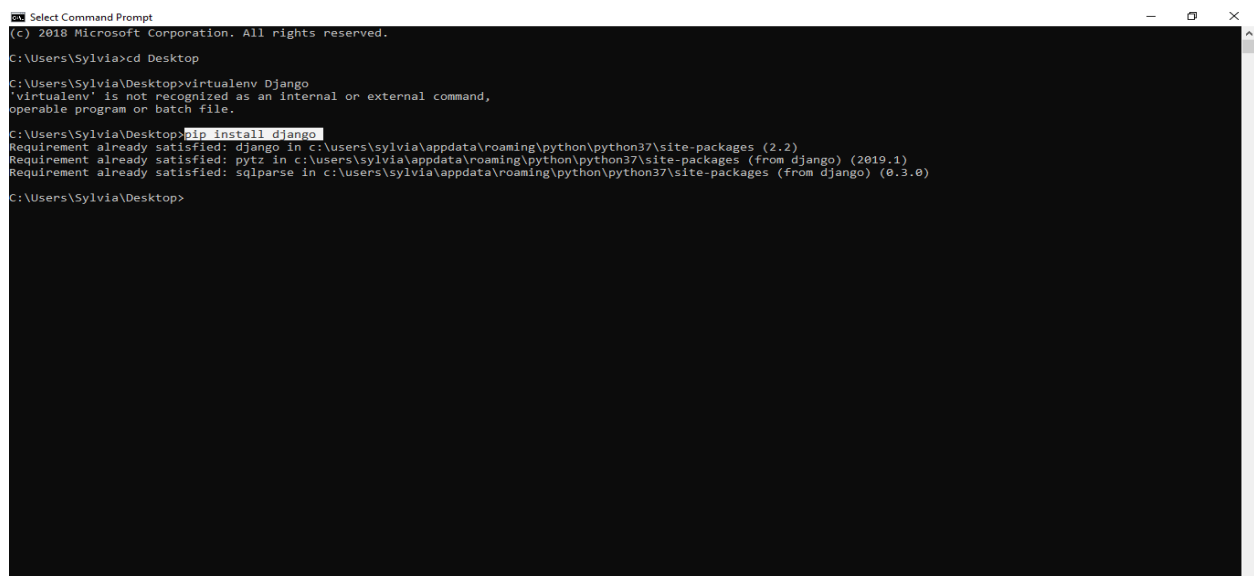

Hardware:

- Processor of at least 1.5 gigahertz (GHz) or higher
- At least 1 gigabyte (GB) of RAM
- Minimum storage space of 8 GB on your machine
- Touchscreen for smartphone or tablet, or keyboard and mouse for your computer
- Internet connection both wired and wireless broadband

Supported Web Browsers:

- Google Chrome
- Mozilla Firefox
- Safari (Only on Mac)
- Internet Explore (Only on Windows)
- Microsoft Edge

Installation guide- First you need to go to your command line and do the command “cd Desktop”, if you are already in your desktop, you will not have to worry about this.

```
Select Command Prompt
(c) 2018 Microsoft Corporation. All rights reserved.
C:\Users\Sylvia>cd Desktop
C:\Users\Sylvia\Desktop>virtualenv Django
'virtualenv' is not recognized as an internal or external command,
operable program or batch file.
C:\Users\Sylvia\Desktop>pip install django
Requirement already satisfied: django in c:\users\sylvia\appdata\roaming\python\python37\site-packages (2.2)
Requirement already satisfied: pytz in c:\users\sylvia\appdata\roaming\python\python37\site-packages (from django) (2019.1)
Requirement already satisfied: sqlparse in c:\users\sylvia\appdata\roaming\python\python37\site-packages (from django) (0.3.0)
C:\Users\Sylvia\Desktop>
```

Then do the command **“pip install django”**. If your requirements are satisfied like mine, you are good to go otherwise it will get installed. If there is an error that occurs, make sure the syntax is correct. If you’re still having trouble, try this command **“pip install Django --user”**. Depending on your machine, you might get an error because of the different syntaxes used.

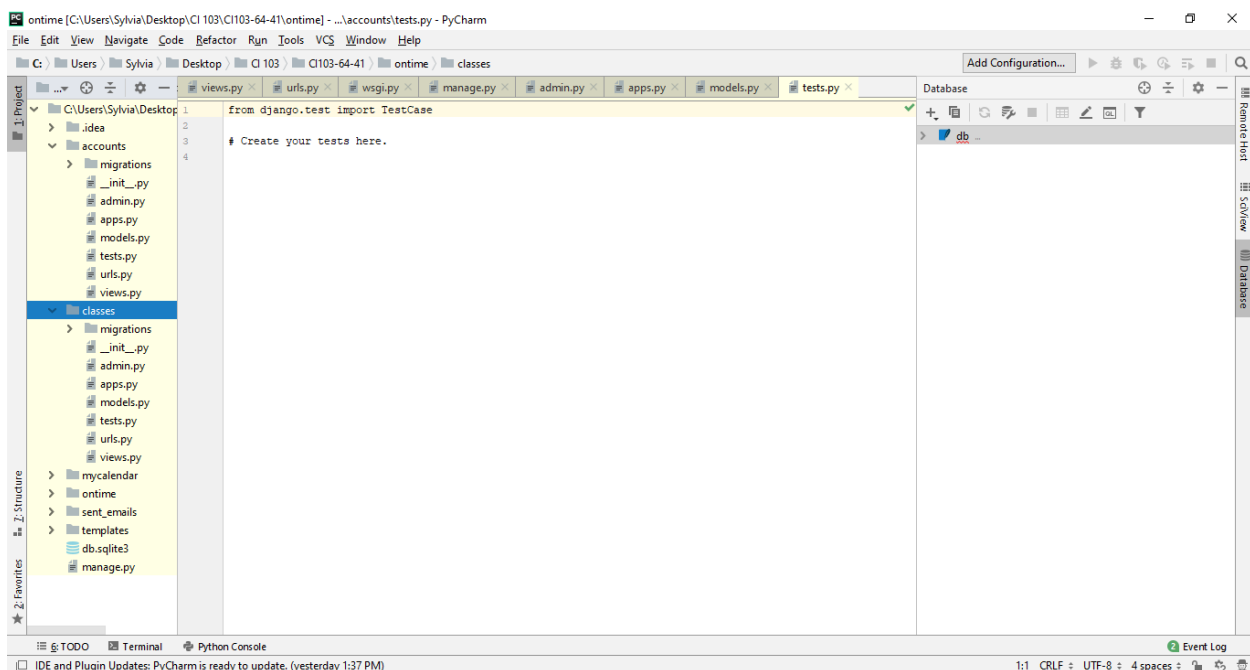

I am running on a windows machine but if you want to go about **installing Django on your mac machine**, I provided a link on tutorials to do so.

<https://www.codingforentrepreneurs.com/blog/install-django-on-mac-or-linux>

Once you get to the webpage, scroll down to the part about installing Django and follow the tutorial and you should be able to install it just fine.

Additionally, I am providing a link to **install Django on android**.

<https://www.webplover.com/install-django-on-android/>

Then open pycharms, thonny, or whatever application you use to write your python code and there you can see there are many classes and libraries integrated with python that you can use in your Django sandbox.

Explanations of error message and troubleshooting guide- An error message can occur when you type the wrong syntax, or your machine does not know how to interpret something. Syntaxes can be very persistent. It is very hard for a machine to understand and interpret what we as humans find easy to learn. Depending on the error, the application should find the line of code where the error occurred and try and find ways to trouble shoot it. There are many online tutorials you can use to find ways to troubleshoot errors.

Here is a very good link to help with installing Django and teaches you everything you need to know-

<https://djangocentral.com/how-to-install-django/>

Logging into your tux server:

Tux is the server that runs the Django database below are some images on how to login in to your tux account and entering your server.

```
Select Command Prompt
05/29/2019 03:28 PM <DIR> ontime
05/29/2019 04:00 PM <DIR> Presentation Images
05/01/2019 03:28 PM 0 README.md
05/08/2019 03:08 PM <DIR> Whiteboard Backup
3 File(s) 35,855 bytes
6 Dir(s) 329,198,157,824 bytes free

C:\Users\Sylvia\Desktop\CI 103\CI103-64-41>ssh wjc52@cs.drexel.edu
ssh: connect to host cs.drexel.edu port 22: Connection refused

C:\Users\Sylvia\Desktop\CI 103\CI103-64-41>ssh wjc52@tu.drexel.edu
ssh: Could not resolve hostname tu.drexel.edu: No such host is known.

C:\Users\Sylvia\Desktop\CI 103\CI103-64-41>ssh wjc52@tux.drexel.edu
ssh: Could not resolve hostname tux.drexel.edu: No such host is known.

C:\Users\Sylvia\Desktop\CI 103\CI103-64-41>ssh wjc52@tux.cs.drexel.edu
wjc52@tux.cs.drexel.edu's password:
=====
Welcome to Tux!
For technical issues, please e-mail ihelp@drexel.edu
For help with classwork, please contact your TA.
=====
wjc52@tux3:~$ ^C
wjc52@tux3:~$ logout
Connection to tux.cs.drexel.edu closed.

C:\Users\Sylvia\Desktop\CI 103\CI103-64-41>ssh wjc52@tux.cs.drexel.edu
wjc52@tux.cs.drexel.edu's password:
Permission denied, please try again.
wjc52@tux.cs.drexel.edu's password:
=====
Welcome to Tux!
For technical issues, please e-mail ihelp@drexel.edu
For help with classwork, please contact your TA.
=====
wjc52@tux2:~$ logout
Connection to tux.cs.drexel.edu closed.

C:\Users\Sylvia\Desktop\CI 103\CI103-64-41>ssh wjc52@tux.cs.drexel.edu
```

You use the command ssh, then your user id, @tux.cs.drexel.edu. Bringing it all together you would do “ssh [youruserid@cs.tux..drexel.edu](#)”

```
Select Command Prompt - ssh wjc52@tux.cs.drexel.edu
=====
Welcome to Tux!
For technical issues, please e-mail ihelp@drexel.edu
For help with classwork, please contact your TA.
=====
wjc52@tux3:~$ ^C
wjc52@tux3:~$ logout
Connection to tux.cs.drexel.edu closed.

C:\Users\Sylvia\Desktop\CI 103\CI103-64-41>ssh wjc52@tux.cs.drexel.edu
wjc52@tux.cs.drexel.edu's password:
Permission denied, please try again.
wjc52@tux.cs.drexel.edu's password:
=====
Welcome to Tux!
For technical issues, please e-mail ihelp@drexel.edu
For help with classwork, please contact your TA.
=====
wjc52@tux2:~$ logout
Connection to tux.cs.drexel.edu closed.

C:\Users\Sylvia\Desktop\CI 103\CI103-64-41>ssh wjc52@tux.cs.drexel.edu
wjc52@tux.cs.drexel.edu's password: 
```

You will then need to enter your password. Your password will not show up on the command line when you type it in. **If you do not know your password contact tux or have any other issues, contact ihelp@drexel.edu.**

```
Select wjc52@tux2: /home2/home-e/egc39/ci-103/ontime
ssh: Could not resolve hostname tex.cs.drexel.edu: No such host is known.

What is Ontime about?

Ontime is an online web application that allows students to be able to input their classes into their calendar. When the student is adding a class to the calendar, they can put in other information about their classes besides the class name such as the time, their instructor, the number of credits that class is worth, the location of their class, and any possible additional criteria. We want students who are struggling with time management to have an application to aid them with managing their heavy workload more efficiently. As students, we were passionate about creating an application so fellow students like us could manage their time and have a school, work, and life balance. With Ontime, our goal is to have students have the ability to work smarter not harder so they can enjoy other activities that are important to them such as sports, clubs, work, leisure time, or any other things that are important to students.
